

Bracket Style Engine Mount

Our patent-pending bracket-style engine mount combines two precisely tuned polyurethane components to handle the full spectrum of engine vibration and torque.

It is a direct OE replacement with superior load management and optimized damping to provide a smooth idle as well as strong impact absorption.

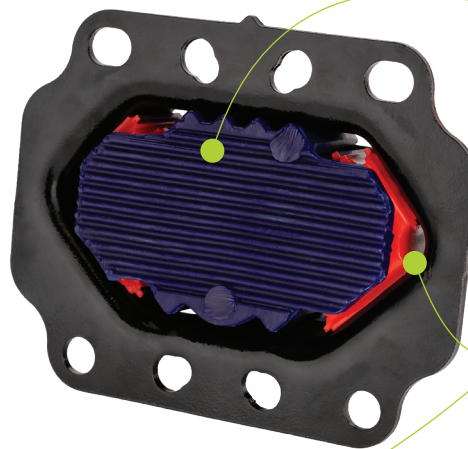

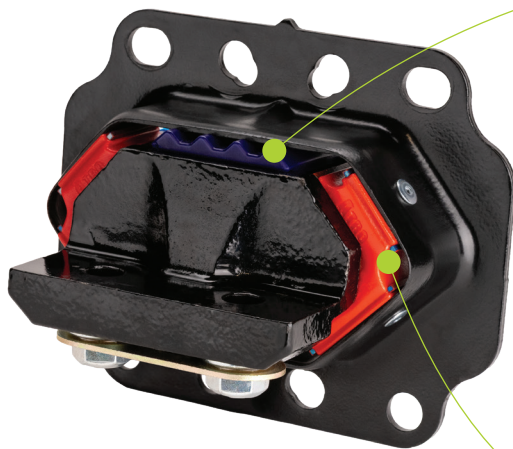

- ATRO polyurethanes are 3-5 times stronger than rubber.
- Resistant to oils, grease, road salt, and other chemicals.
- Specific compounds optimize the performance of each part.

Patent pending, dual-polyurethane design for heavy-duty performance.

The two polyurethane components distribute the workload.

Blue Polyurethane

Engineered with a higher damping ratio to absorb sudden loads when starting from a stop or hitting road impacts like potholes.

Red Polyurethane

Tuned to a lower damping ratio for smooth vibration control during idling and highway cruising.
